

Health and Agriculture Impacts

- u Can we distinguish impacts of different species?
 - u PM Aerosol Components (black carbon, OC, Sulfate)
 - u Gases (ozone, nitrogen oxides, others?)
- u Can we quantify/value benefits of reducing each of these?
 - u Are there some for which we can do this – and just go for it?
- u How do we deal with win/loss examples? E.g.
 - u diesel filters (health and climate win)
 - u that need ultra low sulfur (climate loss)
